

IN THE CLAIMS:

Please enter the amendments shown in the claim listing below, which replaces all previous claim listings.

1. (Currently Amended) An animal chew product, comprising:
an ingestible chew substrate;
a cetyl pyridinium salt and sodium tripolyphosphate incorporated on or in
said ingestible chew substrate; and
wherein said animal chew product is effective to reduce the incidence of
both gingivitis and dental calculus in an animal that chews the animal chew
product.
2. (Original) An animal chew product of claim 1, wherein:
said chew substrate comprises rawhide.
3. (Original) An animal chew product of claim 2, wherein said chew
substrate comprises a body formed from multiple rawhide pieces.
4. (Original) An animal chew product of claim 3, wherein said body
also comprises a binder.
5. (Previously Amended) An animal chew product of claim 3, wherein
said sodium tripolyphosphate and cetyl pyridinium salt are incorporated within
said body.
6. (Original) An animal chew product of any of claims 1-5, wherein
the cetyl pyridinium salt is cetyl pyridinium chloride, and wherein said chew
product incorporates about 0.01% to 0.10% by weight of cetyl pyridinium
chloride.

7. (Original) An animal chew product of claim 6, wherein said chew product incorporates about 0.2% to about 2% by weight of sodium tripolyphosphate.

8. (Original) An animal chew product of claim 1, wherein said sodium tripolyphosphate and cetyl pyridinium salt are incorporated in a coating on said ingestible chew substrate.

9. (Original) An animal chew product according to claim 1, which is a dog chew product.

10. (Original) An animal chew product according to claim 1, which is a cat chew product.

11. (Original) An article of manufacture, comprising a package containing one or more animal chew products of claim 1.

12. (Original) A method for oral care in an animal, comprising providing to said animal for mastication an animal chew product according to claim 1.

13. (Original) A method of claim 12, wherein said providing comprises providing one or more of said animal chew products to the animal per day.

14. (Original) A method of claim 12, wherein the animal is a dog.

15. (Original) A method of claim 12, wherein the animal is a cat.

16. (Currently Amended) A method for manufacturing a animal chew product, comprising:

providing an ingestible chew substrate; and
incorporating sodium tripolyphosphate and a cetyl pyridinium salt on or in
said substrate; and

wherein the animal chew product is effective to reduce the incidence of
both gingivitis and dental calculus in an animal that chews the animal chew
product.

17. (Original) A method of claim 16, which comprises incorporating
sodium tripolyphosphate and a cetyl pyridinium salt in said substrate.

18. (Original) A method of claim 17, which comprises:
providing a mixture containing sodium tripolyphosphate, a cetyl pyridinium
salt and a material for forming said ingestible chew substrate; and
forming said ingestible chew substrate from said mixture.

19. (Original) A method of claim 16, which comprises incorporating
sodium tripolyphosphate and a cetyl pyridinium salt in a coating on said
substrate.

20. (Original) A method of claim 16, wherein said substrate comprises
rawhide.

21. (Original) A method of any of claims 16-20, wherein the cetyl
pyridinium salt is cetyl pyridinium chloride.

22. (Currently Amended) An animal chew product according to claim 1,
wherein said ingestible chew substrate comprises a chewable body formed with
bits of rawhide, and said sodium tripolyphosphate and cetyl pyridinium chloride
are incorporated substantially homogenously within said chewable body.

~~said ingestible chew substrate comprises a chewable body formed with bits of rawhide and a binder, wherein said bits of rawhide have a diameter of less than about 0.25 inches;~~

~~said cetyl pyridinium salt is cetyl pyridinium chloride;~~

~~said sodium tripolyphosphate and cetyl pyridinium chloride are incorporated substantially homogeneously within said chewable body;~~

~~said animal chew product is effective to reduce the formation of dental calculus of an animal that chews the animal chew product; and~~

~~said animal chew product is effective to reduce the incidence of gingivitis in an animal that chews the animal chew product.~~
